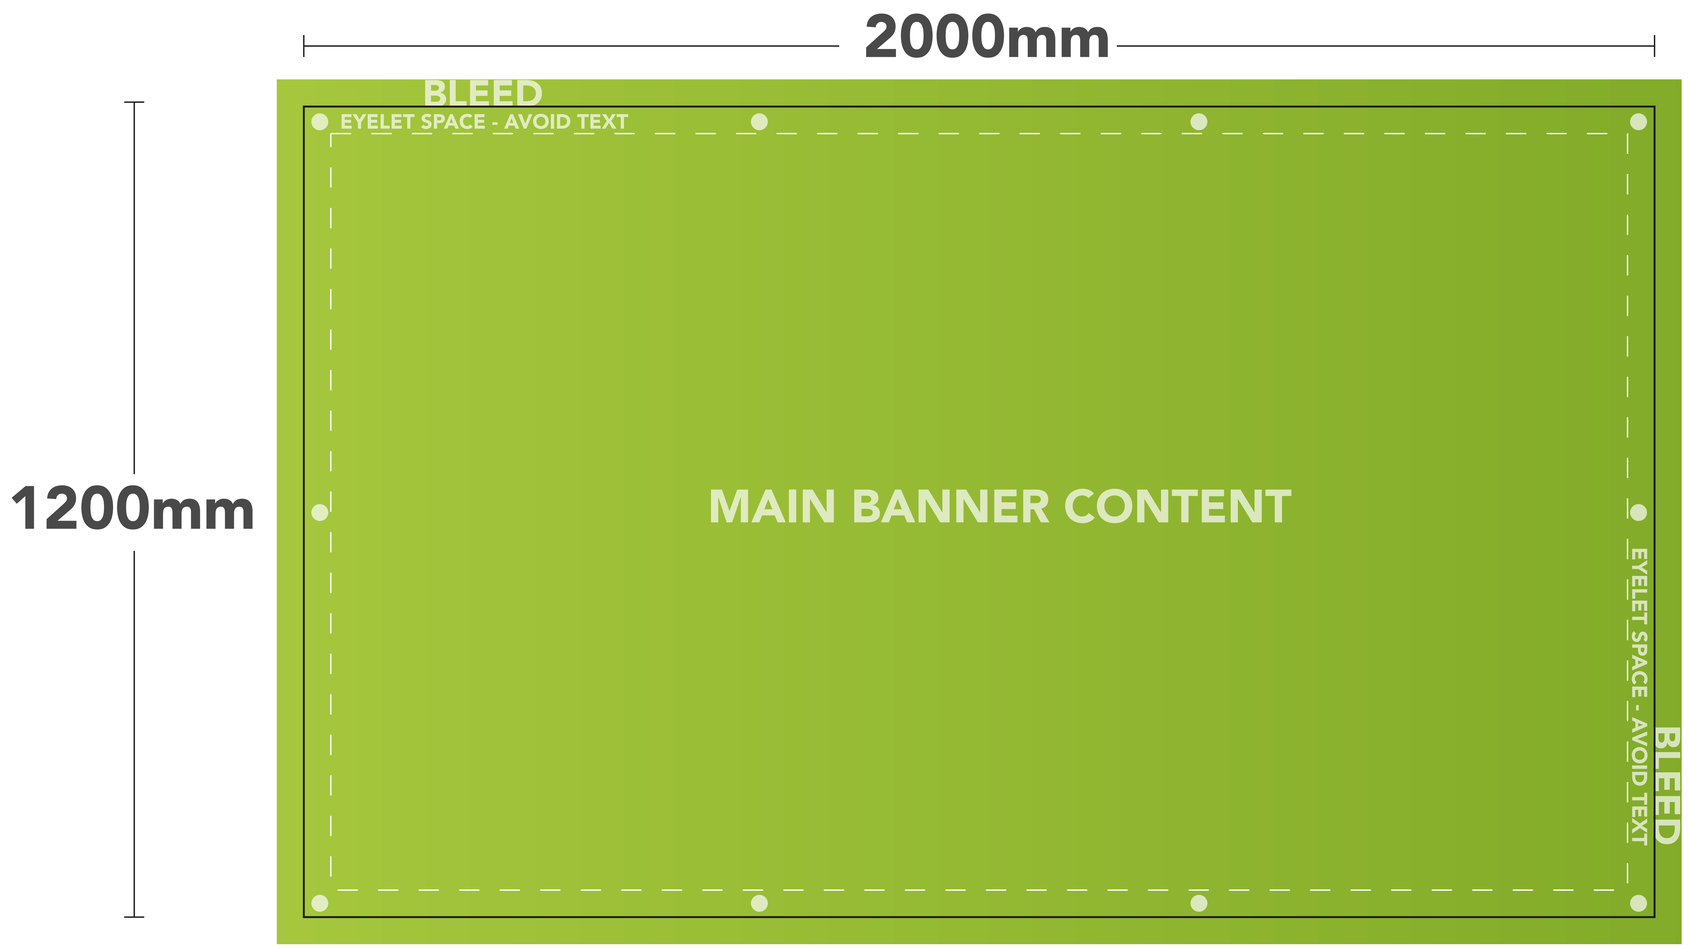
1200mm High x 2000mm Wide Banner Template



Ref: B12x202018

Notes:
Material: White 500Gsm PVC

Bleed: Bleed as per template.

Size:100%. Do not scale if at all possible.

Colour: use CMYK values and leave Pantone Colour references where applicable.

Software:
We prefer Adobe Illustrator files saved as an.eps or as a print quality pdf. We currently use Cc.
If you are using In Design, export the file as a print quality pdf. Package the fonts and the links and send all together as we may need to do some colour correction.

Photoshop Images:
The higher the resolution, the better the results. Try to aim for a minimum of 300dpi at actual size. Save any Photoshop elements as Photoshop with transparent background NOT as jpeg. Do not flatten any layers.

Font usage:
Turn ALL fonts to outlines.

General:
The templates are easy to use- simply click on the part you want to fill and chose a colour.
Keep text and logos 40mm in from the banner edge.
40mm bleed wraps over back if a hem is required.
